EDUCATION

KCA UNIVERSITY

Nairobi, Kenya

Diploma In Information Technology

Graduation Date: Nov 2020

Degree in Information Security and Forensics

Graduation Date: Jul 2024

Full Stack Web Developer - Udemey

Graduation Date: Dec 2024

WORK EXPERIENCE

KCA University

Nairobi, Kenya

IT Support

Jan 2021 - Mar 2021

- Provided first-line technical support by diagnosing and resolving **hardware, software, and system-related issues**, ensuring minimal disruption to departmental operations.
- Collaborated with the IT support team to **troubleshoot and resolve technical issues promptly**, escalating complex problems when necessary.
- Supported **contact center operations** by coordinating with IT teams to resolve hardware and software issues affecting users and daily operations.
- Assisted users with technical problems and ensured that reported incidents were **followed through to resolution**.

Kenya Broadcasting Corporation (KBC)

Nairobi, Kenya

IT Support

Jan 2024 - Mar 2024

- Managed and streamlined **IT support ticketing processes**, improving response times and ensuring timely resolution of user issues.
- Provided technical support and troubleshooting for **hardware, software, and system-related issues**.
- Developed and maintained documentation for common technical issues, troubleshooting procedures, and solutions, improving support efficiency.
- Standardized approaches to recurring technical issues, enabling faster diagnosis and resolution.
- Collaborated with IT and cross-functional teams on technical projects and support activities.
- Adapted quickly to new technologies, systems, and processes while maintaining effective service delivery.

Series Ltd

Nairobi, Kenya

Full Stack Developer

Jul 2025 - Present

- Develop, maintain, and enhance the **Series ERP platform** using **C#, SQL, JavaScript, Node.js, React**, and related technologies.
- Develop utility applications and tools to improve ERP functionality, automate business processes, and support **Business Intelligence (BI)** and reporting requirements.
- Design and maintain integrations between the ERP and external platforms, including **eTIMS, banks, and M-Pesa**, ensuring reliable data exchange and transaction processing.
- Develop and maintain **SQL queries, data processes, reports, and database solutions** to support business and operational requirements.
- Provide application and technical support to existing clients, troubleshooting **software, database, integration, and ERP-related issues** and implementing appropriate solutions.
- Participate in **new client implementations**, configuring, deploying, testing, and supporting ERP solutions according to client requirements.
- Work directly with clients to understand business requirements, troubleshoot issues, and translate operational needs into technical solutions.
- Train clients on **Business Intelligence (BI)** tools, dashboards, reports, and analytics to enable effective use of business data.
- Collaborate with development and implementation teams to investigate defects, implement fixes, and continuously improve ERP functionality and system reliability.

PROJECT EXPERIENCE

MathsPro.academy — Educational Learning Platform

Project link is attached to project title

Technologies: React.js, Vite, JavaScript, Tailwind

- Designed and developed a full-stack educational platform for tutors and students.
- Implemented user authentication, protected routes, role-based access and secure resource permissions.
- Designed database structures and implemented PostgreSQL Row Level Security (RLS) policies through Supabase.
- Integrated Supabase Storage for managing protected educational resources.
- Developed interactive learning functionality allowing tutors to work directly with digital learning materials.
- Integrated a rich-text editor using Tiptap to support interactive educational content.
- Implemented API/server-side functionality using application functions and deployed the application to Vercel.
- Gained practical experience in database design, authentication, authorization, access control and secure web application architecture.

Skills demonstrated: Full-stack development, React, Supabase, PostgreSQL, authentication, authorization, RLS, API development, database design, secure resource management, deployment.

Balm Ortho Medical — E-commerce /Medical Equipment

Project link is attached to project title

Technologies: React.js, Vite, JavaScript, Tailwind

- Developed a responsive e-commerce platform for a medical equipment business.
- Built product browsing and presentation interfaces designed around real business requirements.
- Implemented dynamic product content and user-facing shopping functionality.
- Worked with database-backed application functionality and Supabase services.
- Developed responsive interfaces optimized for desktop and mobile users.
- Integrated backend/API functionality and structured the application for production deployment.
- Applied reusable React components and modern frontend development practices.
- Deployed and maintained the application in a production environment.

Skills demonstrated: E-commerce development, React, responsive design, database integration, Supabase, API integration, UI/UX, component-based development, deployment.

KT Café / Kulatam Restaurant — Restaurant Business

Please Note: This is a mobile only website

Technologies: React.js, Vite, JavaScript, Tailwind

- Designed and developed a production website for a restaurant business.
- Created responsive interfaces for presenting menus, food offerings, restaurant information and contact details.
- Translated real business requirements into a functional digital platform.
- Implemented reusable React components and responsive layouts.
- Optimized the website for desktop and mobile users.
- Managed production deployment and ongoing website updates.
- Worked with real business content, branding, photography and menu information.

Skills demonstrated: React development, responsive web design, UI/UX, component-based development, business requirements analysis, content management, deployment and website maintenance.

OTHER PROJECTS

In addition to the projects above, I have developed several smaller applications to strengthen my practical experience in frontend development, API integration, authentication, data handling and interactive web applications.

ScribeNess — Transcription and translation application [Live Demo](#)

Moodd — Mood tracking web application built with Next.js and Firebase [Live Demo](#)

DynamicCodes — Dynamic QR code generator [Live Demo](#)

APOD-React — NASA Astronomy Picture of the Day API application [Live Demo](#)

BolderMotiv — Fitness motivation web application [Live Demo](#)
